

LTD Broadband is a fixed-wireless ISP service over 25,000 square miles of rural Minnesota and Iowa servicing over 8,000 customers. We offers speed plans from 3 Mbps to 50 Mbps with dedicated links up to 500 mbps.

CTIA and T-Mobile's assertions that investment without 10 year licenses is not credible. LTE gear capable of using CBRS bands is very affordable - under \$3,000.

By having access to affordable PAL licenses on a census block basis we will be able to continue to deploy additional coverage in hard to reach rural locations with low household densities of 2-3 households per square mile.

If the FCC allows the large mobile carriers to bid on very large geographies - they will bid high to go after the high density markets they want and price-out small rural-focused competitors like LTD Broadband.

Rural broadband is a huge public interest issue, and having census block bidding granularity will prevent the type of spectrum hoarding that has been endemic at the large mobile carriers.

Sincerely,

A handwritten signature in black ink that reads "Corey Hauer".
